4(a) Total number of ways that n different books can be put into n different boxes is n^n. — 1

Of these, there are only $n!$ ways in which no box is empty.

The probability is therefore $\frac{n!}{n^n}$. — 1 (total 2)

(b) There are $n(n-1)$ ways of choosing a box to hold 2 books and another box to be empty. — 1

There are C^n_2 ways of choosing 2 books to be put into the same box. — 1

∴ the probability exactly one box is empty is

$$\frac{(n-2)!n(n-1)C^n_2}{n^n} = \frac{n!n(n-1)}{2n^n} \quad \ldots\ldots \quad 1$$

(total 3)

(c) The required probability is $\frac{(n-1)!nC^{n+1}_2}{n^{n+1}}$ — 1

$$= \frac{(n+1)!}{2n^n} \quad \ldots\ldots \quad 1$$

(total 2)

(d) There are two possibilities:

(1) One box containing 3 books and the remaining boxes each containing one. — 1

The probability is $\frac{(n-1)!nC^{n+2}_3}{n^{n+2}}$ — 1

$$= \frac{(n+2)!}{6n^{n+1}}$$

(2) Two boxes each containing 2 books and the remaining boxes each containing one. — 1

The probability is $\frac{(n-2)!nC^{n+2}_2 \cdot (n-1)C^n_2}{n^{n+2}}$ — 1

$$= \frac{(n+2)!(n-1)}{4n^{n+1}}$$

∴ the required probability $= \frac{(n+2)!}{6n^{n+1}} + \frac{(n+2)!(n-1)}{4n^{n+1}}$

$$= \frac{(n+2)!(3n-1)}{12n^{n+1}} \quad 1$$

$k=2 \quad \frac{3}{2}[3^{\frac{2}{3}} - 2^{\frac{2}{3}}] < \frac{1}{\sqrt[3]{2}} < \frac{3}{2}[2^{\frac{2}{3}} - 1^{\frac{2}{3}}]$

Adding, $\frac{3}{2}[(10^6+1)^{\frac{2}{3}} - 1] < S < \frac{3}{2}[10^4]$ — 1

where S is the required sum.

∴ $14998 < S < 15000$ — 1

As L_1, L_2, L_3 are concurrent at the origin, by (a)(ii), the equation of the plane is given by 1

$$\begin{vmatrix} x-0 & y-0 & z-0 \\ p & q & r \\ rq-p^2 & pr-q^2 & pq-r^2 \end{vmatrix} = 0$$ 1

This can be written as

$$(pq + qr + rp)[(q - r)x + (r - p)y + (p - q)z] = 0$$ 1

As p, q, r are distinct, this plane is uniquely defined if $pq + qr + rp \neq 0$ 1

Its equation is $(q - r)x + (r - p)y + (p - q)z = 0$.

(ii) If $pq + qr + rp = 0$, L_1, L_2, L_3 are mutually perpendicular.

There are infinitely many planes each of which contains L_1 and which is perpendicular to the plane containing L_2 and L_3. 1

$\therefore$ (0, 0) is another inflexion point. 1

As $f''(x)$ exists in $\mathbb{R}$ except at $x = 0$ or 1 , these two are the only inflexion points.
